

eSpinner

Full Browser, BML Browser (1seg, FullSeg), compact Browser
High customizability via source code licensing (conditions apply)

FlexMotion

Rich media player (movies, magazines, newspapers, etc.)
Highly versatile content distribution framework with high picture quality

CloudRunner

Ultra lightweight VM for embedded devices (128KB)
Ideal as system platform for "Cloud" devices

MINIPLE

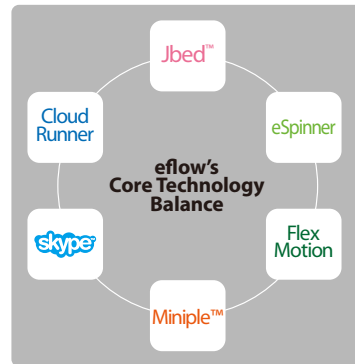

Lightweight network applications
Client-server widget platform featuring synchronized content
and monetized services across multiple devices

skype

Bringing the user-acclaimed Skype™ experience to digital TV,
car navigation, digital picture frames, and various other devices

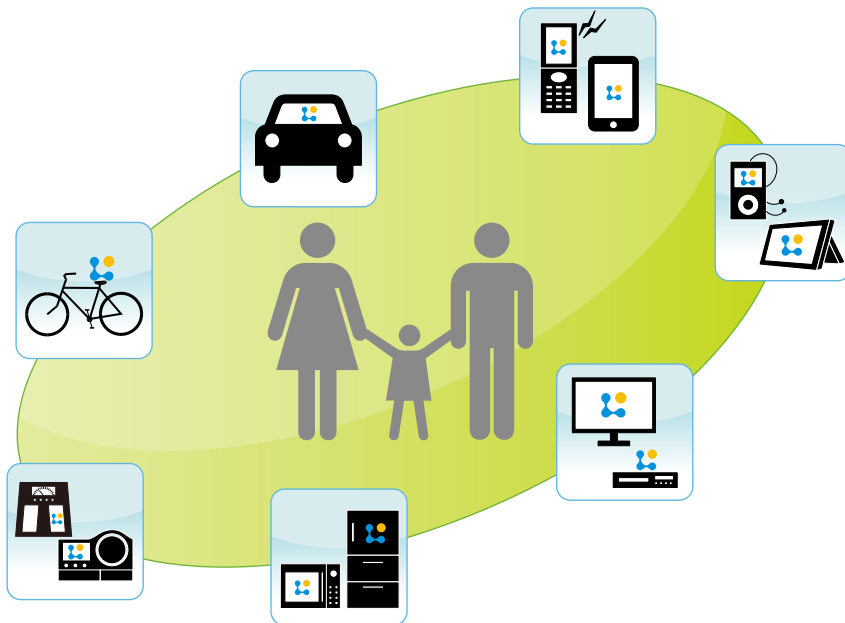

Jbed™

Accelerated Java VM thanks to proprietary compiler technology
Java™ CLDC for mobile devices or Java CDC for stationary devices

Seamless Integrator of Ubiquitous Technology

your ubiquitous lifestyle, now

In just a few more years, every device will be connected and interoperate with all other devices in a ubiquitous network.

You'll wake up to the sound of your favorite music as it plays from your **compact, network terminal** at your bedside. You'll immediately load the weather Widget on the terminal and check the day's forecast. After your shower, you'll step on your **bathroom scale**, and your weight and body fat data will be sent to your health care service. You'll take a seat on your living room sofa, and a message with health care advice from your health care service will arrive as you watch the morning news on **TV**. You'll use your **universal terminal** to program your recording device to record a TV show later in the day. Next you'll use your **universal terminal** to enter the destination that you will drive to when you leave the house. As soon as you get in your car, its **navigation system** will automatically begin giving you directions to the destination that you entered just moments before. After you return home later that night, you'll sink into a relaxing bath and use your **mobile internet device (MID)** to watch the program that you set to record that morning. **eflow** is working to make this ubiquitous lifestyle a reality.
